15 October 2025 – 13:30 – 14:30 classroom S2

Marine Diseases & Climate Change in the **Mediterranean: Health and Diagnostics**

The seminar will be a unique opportunity to deepen our understanding of marine pathology and its implications for biodiversity and fisheries. The lecture will include:

- An introduction to marine **diseases affecting fish and invertebrates** in the Mediterranean region
- The **impact of climate change** on aquatic animal health and mass mortality events
- Diagnostic techniques** used in identifying and monitoring disease outbreaks
- Case studies of **current pathologies** observed in Turkish marine species and their ecological implications

1/3 credits will be recognised
